

Tonsillectomy - 1

Description

Tonsillectomy. Chronic tonsillitis. (Medical Transcription Sample Report)

Preoperative Diagnosis

Chronic tonsillitis.

Postoperative Diagnosis

Chronic tonsillitis.

Procedure

Tonsillectomy.

Description Of Procedure

Under general orotracheal anesthesia, a Crowe-Davis mouth gag was inserted and suspended. Tonsils were removed by electrocautery dissection and the tonsillar beds were injected with Marcaine 0.25% plain. A catheter was inserted in the nose and brought out from mouth. The throat was irrigated with saline. There was no further bleeding. The patient was awakened and extubated and moved to the recovery room in satisfactory condition.
